RB 2.21.6.0 Release Notes

Prepared by

JC

March 31st, 2008

<u>**Files Included**</u>

Rbw.exe – version 2.21.6.0

<u>Bugfixes and Enhancements</u>

1. The way of naming the PDF has been changed so that it now contains appropriate information about the template, item, and label type version. This can be controlled via a settings where the contents of the pdf name can be specified using 6 replacement variables.
2. Additional fields were added to the item form and the facility information.

<u>New Features</u>

1. Drop down capable fields are now in the item master. The user can select whether or not they want each item field to appear as a drop down on the item edit screen via a checkbox in the field definitions.
2. RB now has facility awareness. Now each user and item can be assigned a facility. RB can also be set up to prompt for facility at print time.
3. Print time prompt feature added, which allows item fields designated "prompt" to prompt the user to fill them in at print time. Multiple prompts in one item will appear on one prompt pop up form.
4. A data matrix label can now be used to get data once and to spin through a serial number. The serial number is kept in a database that updates each time an item label is printed.
